**EXTEND A HAND (EAH) PRODUCT DESCRIPTION**

Extend A Hand is the world's only patented folding & locking grab bar. Extend A Hand is your full solution, fall prevention grab bar device. Our folding grab bars surpass all ADA guidelines. It is superior to the conventional grab bar that is limited to a 1 & 1/2-inch space from the wall. Conventional grab bars are restricted to one side and are often too shallow to offer adequate stability for maneuvering. Extend A Hand's 12 inch locking extension allows for the use of both hands for better stability & improved ergonomics. It is exceptional in small spaces where conventional grab bars can not be used. Extend A Hand accommodates pulling yourself up, which requires less upper body strength than pushing yourself from a seated position. All around greater safety is achieved from maneuvering with Extend A Hand grab bars.

**EXTEND A HAND (EAH) PRODUCT SPECIFICATIONS**

Extend A Hand is two products built into one. It starts with a conventional grab bar that mounts direct to wall studs that are made of wood or steel. The width description is the center mount, designed for 16 or 24 inch wall stud placement. (If wall studs are not installed at the building specification, you can install a lateral that bridges two wall studs and then mount the EAH direct to the lateral.) The second component is the extension armature. It is a easy lift auto-locking mechanism that can withstand over 600 pounds of sustained weight. The release buttons that allow for lowering this extension are over one inch diameter to insure easy operation. This product is constructed from all rust free materials and is covered under a three year mechanical warranty. This product comes with step by step instructions for mounting direct to wall tile and standard wall materials. Any where you need a support grab bar Extend A Hand's folding and locking grab bar solution most likely can be mounted.
